

**NEW!**

## KT111 - The **Ultimate** Electrician's DMM, with **automatic detection** of measurement type and range.

The Kewtech KT111 is new and unique as it only has one button. This 'smartmeter' works out which function to measure without having to select it first!

- Single button operation for all functions
- 500V AC/DC Voltage
- Resistance measurement
- Continuity check with audible sound and visual indication
- Auto Ranging
- Data hold
- True RMS DMM
- Large 4000 count LCD display

The unique Kewtech KT111 is the very latest in DMM technology, simply turn on using the central button and then the instrument auto detects whether there is voltage present and whether it is DC or AC. It then automatically selects the correct function and range for resistance or AC or DC voltage measurements. The central button also enables you to hold the result on the screen.

The KT111 also has an integral stand and comes with test leads and batteries. It is protected by a holster which also has a holder for the test leads.
