

## PAT testing made easier with the **KT71**

The manual tester with automatic test sequencing

As easy as **1,2,3.**

1. Plug in your appliance

2. Select your choice of test.

3. Press start!

The KT71 is a popular manual tester, it is easy to use and easy to write test procedures around. Green and red LEDs show the pass or fail status at each test as well as the display showing the actual test result figure. These results rotate on the screen so that they can be documented after all the test sequence has been completed.

To use, just turn the rotary dial to the test required, namely extension lead / IEC lead, Class I IT equipment, Other Class I, Class II or simply a run leakage test. Then connect up and press start. How easy is that?!

**FREE PAT Log 2 with pass labels and certificate**
