

KTD30 Digital Insulation & Continuity Tester

The Kewtech KTD30 is a comprehensive Insulation / Continuity tester it provides for three insulation test voltages: 250V DC for SELV and PELV circuits, 500V DC for circuits up to and including 500V and 1000V for circuits above 500V.

The 200mA continuity test has an auto-null feature for the resistance of the test leads. This can null out up to 2Ω so caters for long extension leads used in R2 testing.

In both the insulation and continuity function there is a 'hands free' mode. When set the instrument will measure whatever is across its test probes. This saves the user having to connect probes and then try and have a hand free to press the test button.

A live circuit warning is provided for when live circuits are inadvertently connected before the commencement of a test.

- 250, 500 & 1000V insulation test
- Continuity up to 10 Ω
- Auto null function up to 2Ω (caters for long test lead extensions)
- 'Hands free' mode
- Live circuit warning
- Protected against accidental live voltage contact
- Auto-shut off to preserve battery life
- Excellent battery life over 5000 tests from only four batteries.
