KEWTECH Clear Thinking with Kewtech **Continuity testing - lighting circuit**

Instrument: Select continuity and ensure that the test leads have been auto-nulled.

Isolate the consumer unit from the supply. Then disconnect line, neutral and CPC. Join line and CPC at the consumer unit with the Kewtech link out (JUMPLDI) or a connector block. Using a LIGHTMATE connect one test lead to the line through the lampholder and one to the large earth terminal at the ceiling rose. The measured result is $R_1 + R_2$. Repeat for neutral to line to ensure that there are no borrowed neutrals.

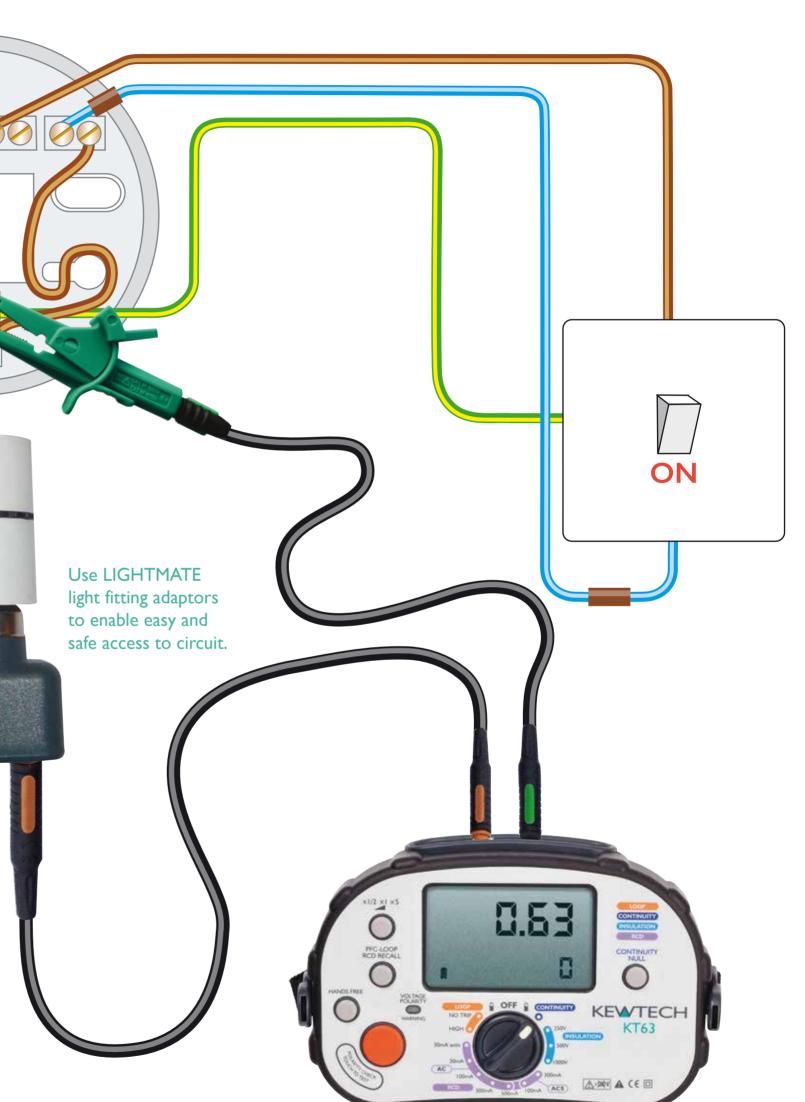

Use a Kewtech link out (JUMPLDI) for easy reliable testing. 1888 • 8888888 - 8888 • 8888 8 8 8 8 0.017 \otimes \otimes

Kewtech 'Clear Thinking' diagrams are schematics to aid the understanding of electrical testing. Ensure proper safety procedures are taken before any testing.
